

The banking industry is in the midst of unprecedented change, and banks to a large extent rely on technology to be the differentiator between success and failure. Nordea's business units rely on its IT departments to provide technology that will allow the bank to stand strong and to excel in this environment.

Nordea IT

Using leading edge technologies, Nordea's IT units develop high performance real-time systems, process thousands of transactions per day and support millions of customers and users worldwide. We run one of the largest technology operations in the Nordics.

Engineers at Nordea

Working with financial instruments requires advanced use of mathematical, numerical and statistical methods as well as strong IT and programming skills. We employ engineers in a wide variety of areas:

- Software Engineering
- IT architecture
- Project Management
- Quality Assurance
- Financial Engineering
- Infrastructure Engineering

Specialists are key people at Nordea and we work hard to develop their potential. The development of our specialists plays a crucial part in our overall ambition to transform Nordea's business from good to great. And the role of specialists will be even more important in future.

At Nordea we make an effort to be innovative, keep our knowledge updated, share ideas and broaden our horizons. For this we constantly need new input and ideas from people interested in technology.
